

## Create a POD calendar on the Wattio SmartHome app

Creating a calendar is an intuitive task, take look at these easy steps:

To create a new calendar, you should to the main menu > *Calendar*.

Press the "+" icon, on the top right, to create a new calendar.

Press over the POD symbol.

In the new screen, name the calendar. Choose a descriptive name, to identify it easily afterwards.

In the Interval section, you can choose between 15 and 60-minute rates.

Choose the sand by limit in W.

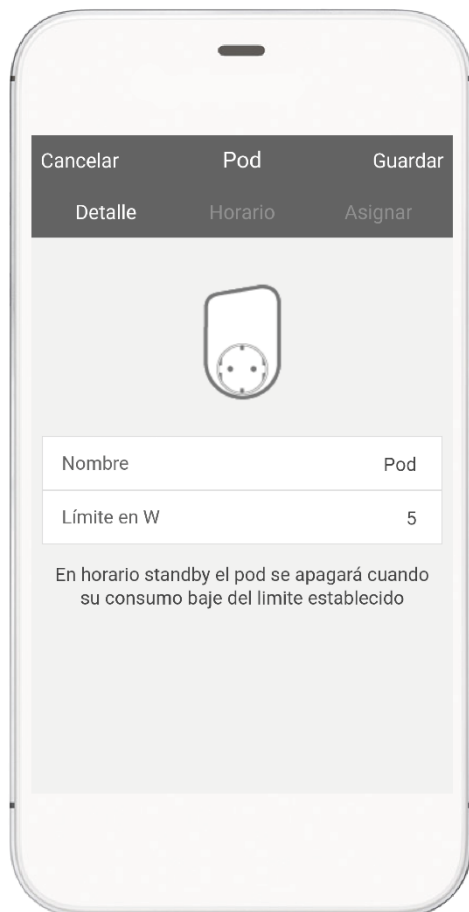

This allows the POD to cut the energy consumption when the appliance is in stand by status, to help you save. First, stablish the energy rate in which the appliance is in standby, by measuring it with the POD.

Press save, on the top right, to continue.

Then, fill the calendar with the on, off or standby status for the time intervals. You can change the status on the bottom left.

On the bottom right, you can click over repeat to copy one day calendar for the rest of the day, to shortcut the calendar set up ;)

Save the calendar (top right) once it is finished.

You now need to choose for which POD you have done the calendar and finally, save to make it start working.
